

How do I Reinstall iRacing without having to download all of my content again?

Authored by: **Shannon Whitmore** [Shannon.Whitmore@iRacing.com]

The best way to reinstall iRacing is to first remove it from your Control Panel...Add/Remove Programs.

Then delete the C:\Program Files (x86)\iRacing folder.

Empty your Recycle Bin.

Then reboot your computer.

After that, access <http://members.iracing.com> and follow the download/install/update instructions.

Although your setups and replays should not be affected in this process, if you feel more comfortable, you can first back up your My Documents/iRacing/Setups and Replay folders first.

To save time (and bandwidth), you can back up your C:\Program Files (x86)\iRacing\Cars and Tracks folders to another location.

Then after deleting and reinstalling the iRacing program, before doing the download/updates - replace the new Cars and Tracks folders with the original ones. Then go back to the iRacing Members site and click Refresh. You may still need to do a small update but it will be much quicker.
