

Configuring iRacing to work with the Oculus Rift

Authored by: **Susan Flint** [susan.flint@iracing.com]

Saved From: <http://faq.iracing.com/article.php?id=223>

First you will want to make sure to have already configured your Oculus using the software provided with the VR Visor.

To setup iRacing to use your Oculus, you will need to go to members.iracing.com and click on "Settings".

Then you will need to run the graphics configuration tool by clicking on the "Launch" button.

SETTINGS

RESET MULTICLASS CAR SELECTION

This button will re-enable the car selection popup for all multi-class series. Click it if you previously chose to hide the car selection popup and now you want to drive a different car.

RESET

RUN GRAPHICS CONFIG Page 2/4

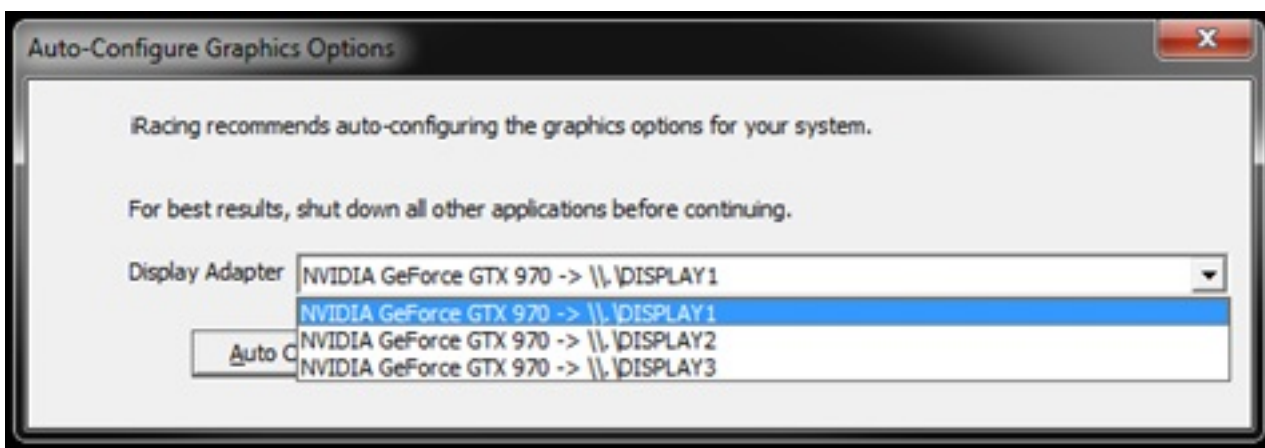

This button will re-run the racing graphics configuration. PDF Generated by PDF Knowledge Base Script

LAUNCH

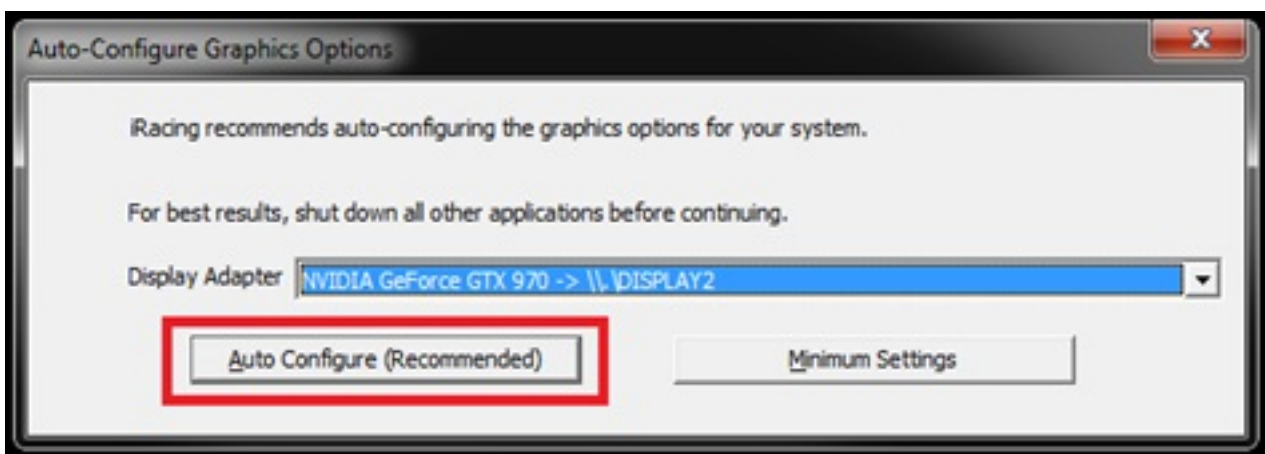

This will open the "Auto-Configure Graphics" setup.
Once you get this screen, click on the drop down menu button:

Then in the list, find and select the display you have previously configured for your Oculus:

The last step is to click the "Auto Configure" button:

Once the configuration completes the Sim will use your Oculus the next time you launch it.

Optionally, you may also use the graphics options in Sim to fine tune some visual settings.
