

Where does the Simulator place my Chassis Setup files when I save them?

Authored by: **Shannon Whitmore** [Shannon.Whitmore@iRacing.com]

When the simulator software is installed, a folder named iRacing is created in your Documents folder. The first time you drive a specific car, a subfolder is created (called Setups) and then in that folder other folders with the names of each of the car.s i.e. solstice rookie, rt2000. Any chassis setup changes you make and subsequently save will be save to the corresponding folder.
