## Recommended Settings for Logitech Wheel and Pedals.

In the Logitech Profiler, or just in the Control Panel / Game Controller / Properties for your wheel:

Open the Logitech Profiler

Set Overall Effects Strength to 100%

Set Spring Effects Strength to 0%

Set Damper Effect Strength to 0%

Enable Centering Spring in Force Feedback Games - uncheck

Set Degrees of Rotation to 900%

In the iRacing Software

Launch the SIM (in a Test session for example)

Click Options and in the Drive tab

Set "Enable Force Feedback" to on

Set Force Feedback Strength to 20% (you can adjust to your liking)

Set Damping to 0%
